## Compiling the program

- `make` to build the program
- `make clean` to clean the program

## Usage

To run the program, use the following command after it has been built: `./a.out addresses.txt`

To change the parameters of the simulation, view the instructions below: - Open `OSProject.c` in a text editor - Adjust the `NUM_FRAMES` and `MEMORY_SIZE` macros to change the size of “physical memory” - Note that `MEMORY_SIZE` should be `256 * NUM_FRAMES`
